These data come from a 2011 national survey among stratified, random samples of 960 third year U.S. medical students. Data in this table are not adjusted for survey design. All variables comes from the first survey (n=564) when students were third years, but those variables marked with \* come from the follow-up survey (n=474) when these third years became fourth years.

†Because of rounding error, results may not sum to 100%. Numbers do not all sum to 438 because of item nonresponse.
